Dear Mr. Moo

According to negotiations with our client (Petro Sina Aria Co.), this is to inform you that you can start manufacturing of doors based on the last drawing and structural calculation. It is necessary to say that final approving is related to correct all the consultant points in structural calculation that have been sent before.

We are waiting to receive these corrections (especially, running software in Sap20000 and preparing structural calculations according to the result) as soon as possible.

Best regards

A. Sehst
Project manager
